JACOB RAMAH

Chicago, IL | 224-716-4633 | jacob612r@gmail.com | linkedin.com/in/jacob-ramah

EDUCATION

Illinois Institute of Technology, Chicago, IL — AUG 2025 - PRESENT
Bachelor of Science, Computer Science, GPA, 4.0

SKILLS

- **TECHNOLOGY**: STM32 | Altium | Git/Github | NixOS | Linux & WSL | Javascript | Python | Unity | Jetpack Compose | React Native | Godot | NodeJS | Figma
- **PROGRAMMING LANGUAGES:** C | Go | Nix | JavaScript | Python | C# | Java | HTML | CSS | Kotlin | GDScript

PROJECTS

PDM (Power Distribution Module):
IIT Motorsports — FEB 2026 - PRESENT

- Developed firmware, in C, for the STM32-based power distribution board that powers the ready-to-drive speakers, the lights, and the cooling system triggered by commands from another board on the car.
- Implemented CAN transmit and receive functions to communicate between the PDM and the network of boards and peripherals on the vehicle's low-voltage system.
- Implemented an SMBus queue on a ThreadX thread to prevent issues when two threads attempt to control the bus at the same time, for example trying to read and write the fan speed at the same time.

CIDER:
Personal Project — SEP 2025

- Built a CLI tool in Go that wraps steamcmd to download Windows builds of Steam games on macOS to simplify a multi-step manual process into one command.
- Implemented a configuration file in JSON to let users customize the install directories and manifest locations to persist the settings between downloads.

CARTOON CRASHOUT:
Group Project — FEB 2025 – MAY 2025

- Developed a ten level 2D platformer in Unity where each level the player progresses up a cat tree to fight a boss at the top.
- Implemented a persistent save system file to allow the user to continue on the level they were last on.
- Designed and implemented a boss encounter with a gravity changing mechanic that the user must use to stomp on the boss three times to defeat it.

WORK EXPERIENCE

SOFTWARE LEAD
IIT Motorsports (Formula SAE), Chicago, IL — AUG 2025 - PRESENT

- Directed a sub-team of 4 software developers in designing, programming, and deploying C firmware on the STM32 powered boards that make up the vehicle's Low Voltage system.
- Taught Low-Voltage and Software sub-team members the how to configure and program an STM32 microcontroller, and how to make wire harnesses for the Low Voltage system.

BAKERY CLERK
Jewel-Osco, Palatine, IL — JUN 2025 – AUG 2026

- Collaborated with other clerks to fulfill customer orders in a time-sensitive manner.
- Executed daily bakery preparations and consistently restocked the display area to maintain product availability for customers.
- Trained new employees in prepping bakery goods.
